

Mechanical Engineer

Batchfire Resources Pty Ltd is an Australian private company that owns and operates the Callide Mine near Biloela in Central Queensland.

A long-standing operation, Callide Mine is an open-cut coal mine producing 11mtpa of thermal coal for domestic power generation, alumina refining, and export markets. The operation has extensive recoverable coal reserves and long-term supply contracts in place, ensuring a long-term future.

About the Role

Location: Callide Mine, Biloela, Central Queensland

This permanent full-time role is a long-term career opportunity with an attractive package and is residentially based in the thriving and family friendly town of Biloela. This regional centre offers incredible educational, medical, sporting and recreational services and facilities making it a great place to live and work.

In this role, the successful candidate will gain exposure to a diverse range of duties and an opportunity to grow professionally in a supportive team environment.

Reporting to the Maintenance Superintendent - Field, responsibilities will include:

- Providing technical support and expertise to the operation regarding all areas of Mechanical Engineering, including a broad range of plant - CHP's, draglines, fixed infrastructure and mobile
- Managing shutdowns on site equipment
- Completing mechanical inspections and facilitating required modifications on large mining equipment
- Driving continuous improvement in all areas of the operations and leading a variety of site initiatives
- Working with maintenance leaders to ensure maintenance systems and reliability engineering services process are implemented and being adhered to
- Lead and contribute to investigations and involvement in failure analysis activities of plant and equipment
- Creating, managing and updating technical documents and ensuring mechanical reviews are carried out.

Skills and Attributes

- Tertiary qualification in Mechanical Engineering or relevant discipline
- 3+ years Mechanical Engineering experience, ideally in the coal mining sector
- Working knowledge of Draglines, Excavators and Coal Handling Plants – desired but not essential
- Previous experience supervising projects and/or maintenance teams – desired but not essential
- A sound understanding of the Coal Mining Safety and Health Act, regulations and the completion of risk assessments
- High level of skill in using MS Suite
- A proactive approach to health, safety and the environment
- Effective time management and positive interpersonal and communication skills.

The candidate must also have the right to work and live in Australia to be considered for this role.

If you have any queries regarding the role, please contact Matilda Fairley, Human Resources Officer, on (07) 4845 1505. All queries and applications will be handled in strict confidence.

Applications close 4 February 2021.

Please note, screening and interviews may commence prior to the advertised closing date.
